

Programme Outcome
Economics (Honours/Major)

Key **program outcomes** include:

- Thorough understanding of micro and macroeconomic principles and their application in areas like international trade, public finance, and development economics.
- Mathematical and statistical proficiency for data analysis, economic modelling, and empirical research.
- Research competence through training in data collection, interpretation, and the use of econometric tools.
- Application of economic theories to real-world issues and policy evaluation.
- Critical thinking and problem-solving abilities to tackle economic challenges at individual, corporate, and societal levels.
- Career preparedness for roles in finance, consulting, government, academia, and research.
- Global economic awareness to understand international trends and their local impacts.
- Effective communication skills to articulate economic arguments and findings clearly.
- Interdisciplinary approach that connects economics with other fields for a holistic understanding of societal issues.
