

### **Programme Specific Outcome**

Education is a subject where an interrelationship has been made between different subjects. It is a subject where ideas from various subjects like philosophy, psychology, sociology, measurement and evaluation, history of education, guidance and counseling, teacher education, etc. are found. Since education is a social preparation, various important issues related to social life have found a place in this subject, which makes education significant for our lives.

The study of education will help in building learning skills and build teaching skills such as subject understanding, oral and written communication, observational skills, interpersonal skills, investigative learning, collaboration, inquiry, time management, teaching, self-management, creating a perfect logic of life, self-realization, information and communication technology skills, how to create a learning environment, understanding the mental outlook of students and building organizations, effective ethics. Education as a subject plays an important role in the continuous development of skills of both students and teachers and provides guidance for healthy living in the social environment. Students can develop their own perspectives, interpretations and ideas about other perspectives, values and behaviors. They can also be aware and understand the individual, culture, society and their natural, socio-economic, political components and their impact on the child's progress, society and the educational system, work like education for children with exceptional needs and they can be aware of their duties and roles towards society.

The study of education is a broad field that encompasses a wide range of skills and knowledge, crucial for both effective teaching and learning. It helps individuals develop critical thinking, communication, and interpersonal skills, along with an understanding of how to create engaging learning environments and foster student growth.

#### **Key points about the role of education:**

- **Building diverse skills:**

Education develops skills like subject matter expertise, oral and written communication, observational abilities, time management, and the ability to create a positive learning environment.

- **Lifelong learning:**

Education equips individuals with the skills and knowledge necessary to adapt to changing situations and continue learning throughout their lives.
